## FOREWORD

The mission of the Water Resources Division of the U.S. Geological Survey (USGS) is to provide the information and understanding needed for wise management of the Nation's water resources. Inherent in this mission is the responsibility to collect data that accurately describe the physical, chemical, and biological attributes of water systems. These data are used for environmental and resource assessments by the USGS, other government and scientific agencies, and the general public. Reliable and objective data are essential to the credibility and impartiality of the water-resources appraisals carried out by the USGS.

The development and use of a national field manual is necessary to achieve consistency in the scientific methods and procedures used, to document those methods and procedures, and to maintain technical expertise. USGS field personnel use this manual to ensure that data collected are of the quality required to fulfill our mission.

Robert M. Hirsch  
Chief Hydrologist

## Techniques of Water-Resources Investigations

### Book 9

### Handbooks for Water-Resources Investigations

#### Contents of Section A: National Field Manual for the Collection of Water-Quality Data<sup>1</sup>

##### A1. Preparations for Water Sampling

##### A2. Selection of Equipment for Water Sampling

##### A3. Cleaning of Equipment for Water Sampling

##### A4. Collection of Water Samples

##### A5. Processing of Water Samples

##### A6. Field Measurements

###### **6.0 General Information and Guidelines**

###### **6.1 Temperature**

###### **6.2 Dissolved Oxygen**

###### **6.3 Specific Electrical Conductance**

###### **6.4 pH**

###### **6.5 Reduction-Oxidation Potential (Electrode Method)**

###### **6.6 Alkalinity and Acid Neutralizing Capacity**

###### **6.7 Turbidity**

##### A7. Biological Indicators

###### **7.1 Fecal Indicator Bacteria**

###### **7.2 Five-Day Biochemical Oxygen Demand**

##### A8. Bottom-Material Samples

##### A9. Safety in Field Activities

# CHAPTER A6. FIELD MEASUREMENTS

*Edited by F.D. Wilde and D.B. Radtke*

---

## ABSTRACT

The *National Field Manual for the Collection of Water-Quality Data* (*National Field Manual*) provides guidelines and standard procedures for U.S. Geological Survey (USGS) personnel who collect data used to assess the quality of the Nation's surface-water and ground-water resources. Chapter A6 presents procedures and guidelines for the collection of data on air and water temperature, and on dissolved-oxygen concentrations, specific electrical conductance, pH, reduction-oxidation potential, alkalinity, and turbidity in water.

Each chapter of the *National Field Manual* is published separately and revised periodically. Newly published and revised chapters will be announced on the USGS Public Home Page on the World Wide Web under "New Publications of the U.S. Geological Survey." The URL for this page is <<http://water.usgs.gov/lookup/get?newpubs>>.

---

## INTRODUCTION

As part of its mission, the U.S. Geological Survey (USGS) collects data needed to assess the quality of our Nation's water resources. A high degree of reliability and standardization of these data are paramount to fulfilling this mission. Documentation of nationally accepted methods used by USGS personnel serves to maintain consistency and technical quality in data-collection activities. The USGS publishes Techniques of Water-Resources Investigations (TWRI) reports that document scientific methods used by USGS personnel. TWRI publications are listed at the end of this report.

TWRIs are grouped under major subject headings called books. The Book 9 series, Handbooks for Water-Resources Investigations, is designed for field use and was developed to summarize, from

other TWRIIs and other references, techniques for planning and conducting specialized work in water-resources investigations. The *National Field Manual for the Collection of Water-Quality Data* (*National Field Manual*) is Section A of Book 9. The *National Field Manual* is comprised of individually published chapters. Chapter numbers are preceded by an “A” to indicate that the report is part of the *National Field Manual*.

Chapter A6 on field measurements includes procedures, techniques, and guidelines for planning and conducting specialized work in water-resources investigations. Sections and other chapters of the *National Field Manual* are referred to in this report by the abbreviation “NFM” and the chapter and (or) section number. For example, general information on temperature measurements is covered in section 6.1 of Chapter A6 “Field Measurements” and is cited here as NFM 6.1.

---

## PURPOSE AND SCOPE

The *National Field Manual* provides guidelines and standard procedures to be used by USGS personnel for field activities related to water-quality data collection and analysis. This manual is targeted specifically toward data collectors in order to (1) establish and communicate scientifically sound methods and procedures, (2) encourage consistent use of field methods for the purpose of producing nationally comparable data, and (3) provide methods that minimize biasing the data and, when properly applied, that result in data that are reproducible within defined limits of variability.

**Data collectors must have formal training and field apprenticeship in order to correctly implement the procedures described in this report.** The information provided in Chapter A6 is to be used in conjunction with *Water Temperature—Influential Factors, Field Measurement, and Data Presentation* by H.H. Stevens, Jr., J.F. Ficke, and G.F. Smoot (Techniques of Water-Resources Investigations of the U.S. Geological Survey, Book 1, Chapter D1, 1975), and *Guidelines for Collection and Field Analysis of Ground-Water Samples for Selected Unstable Constituents* by W.W. Wood (Techniques of Water-Resources Investigations, Book 1, Chapter D2, 1981).

It is impractical to provide guidance that would encompass the entire spectrum of data-collection objectives, site characteristics, environmental conditions, and technological advances related to water-quality studies. The fundamental responsibility of field personnel is to select methods that are compatible with the scientific objective for the field work and to use procedures that are consistent with USGS standard procedures to the extent possible. Under some circumstances, data collectors may have to modify standard procedures. Whenever a standard procedure is modified or an alternative procedure is used, a description of the procedure used and supporting quality-assurance information are to be reported with the data.

---

## FIELD MANUAL REVIEW AND REVISION

Chapters of the *National Field Manual* will be reviewed, revised, and reissued periodically to correct any errors, incorporate technical advances, and address additional topics. Please send comments or corrections to: NFM-QW, USGS, 412 National Center, Reston, VA 20192 (or send electronic mail to: [nfm-owq@usgs.gov](mailto:nfm-owq@usgs.gov)). Newly published and revised chapters will be announced on the USGS Home Page on the World Wide Web under "New Publications of the U.S. Geological Survey." The URL for this page is <<http://water.usgs.gov/lookup/get?newpubs>>.

---

## ACKNOWLEDGMENTS

The information included in the *National Field Manual* is based on existing manuals, a variety of reference documents, and a broad spectrum of colleague expertise. In addition to the references provided, important source materials included unpublished USGS training and field manuals and technical memorandums. The authors wish to acknowledge those individuals in the USGS who developed the field and training manuals that provided the foundation for this *National Field Manual*: M.E. Dorsey, T.K. Edwards, W.B. Garrett, W.J. Gibbons, R.T. Iwatsubo, R.T. Kirkland, J.R. Knapton, C.E. Lamb, L.R. Lister, R.F. Middelburg, Jr., J. Rawson, L.R. Shelton, M.A. Sylvester, and F.C. Wells.

The editors and authors are indebted to Chester Zenone, for his insightful suggestions and guidance; I.M. Collies, who provided editorial assistance; C.M. Eberle and B.B. Palcsak for a thorough editorial review of the first draft; and E.A. Ciganovich and G.J. Allord for their expertise, talent, and innovation in book design and publication. Appreciation is extended to the scientists consulted from the U.S. Environmental Protection Agency and from private industry, including Hach Company, Hydrolab Corporation, and Yellow Springs Instrument Company.

The following colleague reviewers provided valuable contributions that improved the quality of this document: R.T. Iwatsubo and K.A. Pearsall, who reviewed this document in its entirety for technical soundness, and

H.D. Ardourel	J.M. Neil	L.R. Shelton
O.P. Bricker	V.W. Norman	D.A. Sherwood
M.E. Brigham	C.E. Oberst	R.L. Snyder
I.M. Cozzarelli	G.B. Ozuna	D.L. Stanley
M.E. Dorsey	C.J. Patton	D.Y. Tai
D.J. Gellenbeck	L.N. Plummer	D.C. Thorstenson
C.M. Harris	T.J. Popowski	R.J. Wagner
R.J. Hoffman	K.C. Rice	W.E. Webb
M.M. Kennedy	R.L. Rickman	A.H. Welch
R.J. LaCamera	I.J. Roberts	F.C. Wells
J.D. Martin	H.W. Sanger	J.S. Zogorski

Many thanks go to T.L. Miller, whose encouragement and faith in this project have been instrumental to its achievement; and to D.A. Rickert for providing the support needed to produce a national field manual for water-quality studies.
